

SELECTED PARKLAND TREES

SELECTED SPECIMEN SHRUBS

The Dodder Greenway will be extensively planted with trees, shrubs and ornamental planting further greening up the existing landscape.

For the most part, native trees and shrubs have been selected. The planting will provide bio-diversity and support vertebrate, invertebrate fauna as well as providing habitats for flora.

Tree species chosen reflect the local environment and setting. Large parkland trees have been selected for open areas while smaller trees have been chosen for areas close to residential houses and streets. Riparian riverside planting has been selected to provide a naturalistic context to the River Dodder. Large Oak species line the route and create an avenue effect. Where space is restricted Birch and Alder are used to form an avenue. Ornamental planting is used to highlight entrances and key feature areas. The planting will add to the green infra-structure of the area and greatly improve the landscape in the public realm.
